

9. Assumptions

As you develop your solution you will undoubtedly come across scenarios where the behaviour is not defined by the rules of the specification. In these cases you should make a post on the [Assumptions Megathread in the forum](#) asking the Course Staff whether you are able to make an assumption about the behaviour in this case. We will either a) approve the assumption and add it to our list of approved assumptions, which will be listed under the forum post, b) update the specification if appropriate, or c) respond explaining how the behaviour is defined in the scope of the specification.

Any ambiguities/assumptions that we have listed as approved **we will not be testing in automarking**. However, in many cases your solution will need to implement a particular behaviour (and make an assumption). This will need to be documented, and you will need to write tests for that assumed behaviour where appropriate.

Put your documentation inside a file named `assumptions.pdf` in the root directory of this repository.
